Error Troubleshooting Strategy

When LaTeX encounters an error, it provides a line number and a descriptive error message in the log file (e.g., `Undefined control sequence` or `Too many columns in tabular`).

Subject Indexing

Important terms in large documents can be indexed automatically using the makeidx package. For example, we can index LaTeX commands and compilation steps.

References and Citations

Academic and technical documents rely on BibTeX for reference management. A typical citation looks like this: as explained by Lamport [1].

References

[1] Leslie Lamport, *LaTeX: A Document Preparation System*, Addison-Wesley, 1994.
